

**EVENTSTAN UPGRADE
SUGGESTIONS**

**HERE ARE SOME
SUGGESTED FEATURES
FOR THE NEXT VERSION
OF EVENTSTAN**

1. RECURRENT EVENT

This should allow users to book events that are periodic, such as monthly meetings, etc.

The user will not need to be booking the event each time.

2. EVENT REBOOKING

This feature allows the user to rebook an event from already booked event therefore retaining previous options (if available) and allowing user to change any settings during the booking process

3. AI DRIVEN SUGGESTIONS

This feature suggests events such as hangouts, parties using users current location neighborhood, previous suggestions, likes, etc.

The app will periodically bring list of suggestions to user as a form of survey thereby learning users like.

4. DYNAMIC PACKAGE PRICING

This will allow vendors create multiple price values for the same package.

For example

Gold AED 5,000

SILVER: AED 3,500

BRONZE: AED 2,000

Each Sub-Package will have different features

5. VENUE TOURS

This feature will allow user to take a tour of the venue.

This can help them make better decisions without the need to physically visit the locations

6. GUEST RESERVATIONS

As a marketing strategy, when a user complete booking an event, he can share the event link to his guests via social media platforms to indicate interest or reserve seats. The system will also periodically send reminders to the guests, and the event owner will also have overview of how much guest he is expecting. This strategy will help advertise the platform to the guests.

7. VENDORS COLLABORATION TOOLS

This feature should allow vendors share/borrow services.

Example: a vendor that provides venue, can collaborate with another vendor that provides catering service to create a single package.

8. VENDOR RATING BASED SUGGESTIONS

This feature will make suggestions to users during bookings based on previous performances of the vendors and how they were rated.

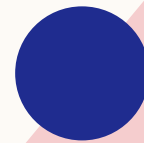

Can use: TripAdvisor rate and review system

9. BUDGET FRIENDLY QUESTIONNAIRE FLOW

This feature will allow users to book events by answering just some questions in few screens, then based on the answers provided by the user, the system will generate best-fit vendors and services to suit the users requirement.

10. AREA BASED SUGGESTIONS

This feature will bring suggestions based on proximity, family members previous bookings, and previous events attended.

THANK YOU
