Led awareness initiatives and sustainability drives on campus

Operations Team Member – 67th Milestone Event

Supported end-to-end event logistics and coordination
Contributed to event planning that drew participation from over 500+ attendees

Projects

Consumer Insights Dashboard for Cosmetic Products, Consumer Product Analysis Dashboard

Tools Used: Microsoft Excel (PivotTables, Power Query, Slicers)

Problem Statement: Cosmetic brands struggled to identify consumer preferences and product performance across categories.

Solution & Time Savings: Built an interactive dashboard that automated analysis by gender, skin type, and ingredient efficacy, reducing manual data work by 65%.

Impact: Enabled stakeholders to uncover patterns in usage, optimize product development, and align marketing with audience needs. Used in decision-making simulations.

SQL Database Project, College Course Registration System

Tools Used: SQL (Joins, Views, Subqueries, DDL/DML)

Problem Statement: Traditional registration systems lacked integration between students, courses, and payment tracking.

Solution & Time Savings: Developed a relational database schema covering students, registrations, payments, and course details. Implemented advanced queries and joins for efficient data retrieval.

Impact: Simulated a complete academic ERP backend. Enabled streamlined registration, payment reconciliation, and academic reporting with **0% data duplication**.

Software Bot creation with UiPath, *UiPath Email-to-Excel Automation Bot*

Tools Used: UiPath, Outlook Integration, Excel Automation

Problem Statement: Teams spent hours manually copying structured data from emails into Excel—time-consuming and error-prone.

Solution & Time Savings: Created a UiPath bot to extract and log email data into Excel, reducing task time by **80–90%**.

Impact: Improved data accuracy, eliminated manual effort, and enhanced productivity for teams like HR, finance, and analytics.

Future Scope: Integration with cloud storage, email attachments, and automated reports.

Software Bot creation with Zapier, *Automated Customer Feedback Collection Using Zapier*

Tools Used: Zapier, Shopify, Gmail Integration **Problem Statement:** Manually requesting customer feedback post-sale delayed responses and added administrative burden.

Solution & Time Savings: Built a Zapier automation that triggers a Gmail feedback request after each Shopify sale—**saving 100% of manual follow-up time**.

Impact: Enabled faster feedback loops, improved customer insights, and helped support product/service refinement at scale.

Design Thinking Startup Project, *Pick Pack Pro – AI-Powered Fulfillment System*

Tools Used: Design Thinking, Business Model Canvas, Financial Modeling, Market Research.

Problem Statement: Manual packaging in quick-commerce led to delays, errors, and high labor costs.

Solution & Time Savings: Designed a smart vending-style packaging system that **cut labor costs by 90%** and **reduced packing time by 60%**.

Impact: Achieved **breakeven in 18–20 months** with projected **₹22 Cr net profit by Year 3**. Validated through pilot testing with platforms like Blinkit and Zepto.
