Skills

SQL | Python | Power BI | MS Excel | Apache Spark

Projects

Predictive Analytics of Customer Churn

- Engineered a scalable churn prediction pipeline in PySpark on Databricks, processing 7K+ telecom records with 20+ features for customer behavior analysis.
- Performed feature engineering, handled class imbalance, and trained models like Logistic Regression and Random Forest.
- Achieved over 85% accuracy and visualized feature importance and churn likelihood with interactive dashboards.
- Streamlined the model deployment using Spark MLlib and exported reports for business insights.
- **Technologies:** PySpark, MLlib, Pandas, Matplotlib, Classification Models.

Vendor Performance Analytics

- Built a modular Python pipeline analyzing 1,200+ vendor records across 5+ performance metrics, enabling scalable ingestion and error-resilient processing.
- Implemented sandbox validation and logging to ensure 100% ingestion accuracy and traceability across workflow stages.
- Engineered quantile-based segmentation and distribution plots to classify vendors into 3 performance tiers, aiding strategic decision-making.
- **Technologies:** Python, Pandas, Seaborn, Matplotlib, SQL, Power BI, Modularization, Logging.

Data Science Job Market Analysis (Excel Project)

- Analyzed 32K+ job listings from 2023 using Excel to uncover trends in median salaries, top data skills, and geographic salary variations.
- Built 3 key visualizations highlighting skill trends and salary insights using bar and scatter plots
- Modeled relational data using Power Pivot; cleaned and transformed data via Power Query for consistent schema and skill normalization.
- **Technologies:** Microsoft Excel, Power Query, Power Pivot, DAX, Data Analysis, Data Visualization.

COVID-19 Data Analysis

- Analyzed 475,000+ rows of global COVID-19 data to uncover patterns in infections, mortality, vaccinations, and government responses.
- Executed 35+ advanced SQL queries using window functions, aggregations, and CTEs for trend insights and regional comparisons.
- **Technologies:** SQL, PostgreSQL

Education

Indian Institute of Information Technology, Nagpur

Nov 2022 – Current

BTech in Computer Science and Engineering

- **Relevant Coursework:** Database Management Systems (DBMS), Big Data Analytics

Certifications & Achievements

HackerRank SQL (intermediate) Certificate

Solved 250+ Problems on various platforms such as HackerRank , Leetcode and StrataScratch.
