Quantitative Trader | Systematic Options Strategist | IIT Kharagpur Alumnus

Systematic trader with 6+ years of engineering and trading experience. Proven record of generating consistent alpha in Indian equity derivatives, specialising in volatility-based, delta-neutral and mean-reversion strategies. Currently managing ₹1Cr live capital with institutional-grade infrastructure and seeking a strategic partnership to scale with a proprietary trading desk.

Trading Experience

- **Live Strategy:** Running a fully systematic strategy on NIFTY/BankNIFTY options with ₹1Cr self-owned capital with CAGR ~35% since 2019
- **Track Record:** Previously scaled to ₹3Cr+ (including third-party capital, now paused)
- **Scalability:** Tech and execution infra ready for ₹25Cr+ live deployment; backtested and stress-tested up to ₹100Cr.
- **Risk Discipline:** Quantitative drawdown limits (never breached 12% max drawdown), real-time monitoring and fail-safes.
- **Execution Stack:** Semi-Automated Python framework with live API integration (Firststock, Fyers)
- **Sharpe Ratio:** 2.4 annualised (live, multi-year)
- **Trading Strategy:** Bi-Weekly Volatility-Anchored Options Strategy
A direction-neutral model using Indian index options, anchored to macro expectations and VIX regimes. Strike selection and risk calibration are dynamically tuned to decay probability and capital efficiency, with built-in firefighting and SL logic to preserve MTM control across a rolling 2-week cycle.

Note: Ready to share detailed live trade records and infra codebase on request post NDA. Open to strategy walkthroughs, live trade, and joint capital deployment.

Work Experience

- Principal Validation Engineer, Nexperia - Bangalore
April 2025 - Present
- Senior Product Validation Engineer, Texas Instruments - Bangalore
July 2019 - April 2025
- Summer Intern, NIT Durgapur
June 2015 - July 2015

Education & Certifications

- **MSc Financial Engineering** – WorldQuant University (Ongoing)
- **M.Tech, Electronics & Communication** – IIT Kharagpur, 2019
- **Certifications:** Bloomberg Market Concepts, NISM XV Research Analyst, Bloomberg Excel, EPAT (Ongoing), FRM Part 1 (Expected 2026)

Skills

- **Trading:** Direction-neutral options strategies, volatility modelling, Greeks
- **Tools:** Python (NumPy, Pandas, Matplotlib, TA-Lib) REST APIs (Firststock, Fyers), TradingView
- **Backtesting:** Custom frameworks, Sharpe/drawdown stats, portfolio simulation
- **Platforms:** Jupyter, PyCharm, Excel integration
- **Documentation:** GitHub portfolio with code, notebooks, and research write-ups

Projects

- **Nifty Intraday Strangle** – Backtester for fixed-premium CE+PE selling with dynamic stop-loss, EOD exit logic, and capital tracking.
- **Nifty Mean Reversion Study** – Multi-indicator backtest using Bollinger Bands, RSI, and SMA crossovers to evaluate reversal vs trend-following behaviour.
- **Nifty Positional Strangle (In Progress)** – Strategy framework for weekly delta-neutral strangles with SL, expiry window filters, and rolling logic.
- **Option Pricing Models (In Progress)** – Implementation of Black-Scholes, Binomial Trees, and Monte Carlo-based Greeks using QuantLib and NumPy.
