

NITYA DUBEY

6264220924 | nityadubey084@gmail.com | MP

Summary

Highly organized and proactive student with optimistic nature and strong academic background, ready to learn and contribute in a professional environment.

Experience

Edunet Foundation | Remote

Python developer | 02/2025 - 03/2025

During my internship, I developed a personal fitness tracker, designed to help individuals track workouts, monitor BMI, and achieve healthy weight gain goals. The app enables users to log workouts, set weight targets, track progress, and visualize statistics — all within a clean, responsive interface.

Internshala | Remote

Isp Partner | 01/2025 - 02/2025

Promoted Internshala on campus, making students aware about different trainings and courses offered by Internshala.

Skills

Python, Data Analysis Skills, Power BI, Data Management, SQL Server, Microsoft excel, Microsoft word, WordPress, Communication skills, Time management, Tableau

Education

SVVV | Indore

Btech, CSE | 06/2026

CGPA : 8.41/10

XII | Vidisha

PCM | 03/2021

Percentage: 92.40%

X | Vidisha

General | 03/2019

Percentage: 92.40%

Projects

1. Personal Fitness Tracker. Mini Project – Python, Streamlit, Pandas, Matplotlib.

- Designed and developed a browser-based fitness tracker using Streamlit.
- Implemented features like workout logging, BMI calculator, weight gain tracking, and progress visualization
- Used Pandas for data handling and Matplotlib for plotting workout/weight trends.
- Enabled user-friendly interface with form inputs and interactive dashboards.
- Deployed locally and used by peers for tracking fitness goals

2. Retail Sales Analysis with Power BI and Python Tools - Python, Power BI

- Cleaned and transformed retail sales data using Pandas
- Developed an interactive dashboard in Power BI to visualize sales KPIs by product, region, and month
- Enabled slicers and filters for dynamic exploration by business stakeholders

3. Smart Appliance Control via Mobile Tools - Python, Arduino/NodeMCU, Blynk App / Firebase, IoT

- Developed a smart home prototype that allows users to operate appliances remotely via smartphone
- Integrated microcontroller (ESP8266) with relay modules to control appliances like lights or fans
- Built a mobile interface using Blynk/Firebase to send real-time control signals over Wi-Fi

- Enabled secure and wireless operation of appliances with feedback status
- Designed for energy efficiency and ease of use with automation potential

Certificates

Coursera Google Data Analytics Specialization, Tata Group – Data Visualization, Job simulation, Deloitte Australia - Data Analytics Job Simulation
