ACTIVITIES

Activity 1:
Science in My
Surroundings

Activity 2: Story
Cubes

Activity 3: Math
Dice Game

Activity 4: Rhyme
Wheels

Activity 5: Puzzle
Posters

Activity 6: Child
Rights Comic

Activity 7:
Alphabet Animal
Cards

Activity 8:
Emotion Emoji
Cards

Activity 9:
Problem-Solution
Cards

Activity 10:
Safety Rule Mini-
Zines

Activity 11: My
First Dictionary

Activity 12:
Career
Flashcards

Activity 13: Time-
Telling Clocks

Activity 14:
Bilingual Word
Cards

Activity 15:
Nutrition Snap
Cards

Activity 16:
Recycled Art
Cards

Activity 17:
Friendship
Bracelet Kits

Activity 18: Story
Sequencing
Cards

Activity 19:
Shape Sorting
Mats

Activity 20:
Budgeting
Worksheets

ACTIVITY 1: Science in My Surroundings

Objective:

This activity is designed to make children see that science isn't only in books—it's everywhere around them. By connecting common, every-day objects (such as a fan, a rainbow, or a pressure cooker) with scientific concepts (such as motion, light, or pressure), kids start learning how the world works through observation and investigation. Staff members play an important part by showing how science works in real life and explaining the basic principles behind each one. They engage kids in by encouraging them to pose questions about the instruments, about what they see in their environment, which brings in the world of science in a fun and accessible way. This hands-on, minds-on approach incorporates inexpensive materials to captivate young people's imaginations, igniting their curiosity about science, opening their minds to its possibilities and its ethical boundaries as early as middle school. It shows student's what they learn in class, and how they use it out in the real world which in turn makes every subject a lot more interesting and necessary.

Key Learning Outcomes for Children:

This activity enables children to relate science principles to everyday objects they encounter daily, making learning more personal and interactive. It develops observation skills, acquaints them with fundamental scientific terms such as motion and gravity, and fosters curiosity by inviting children to probe "why" and "how" about the surroundings. Through establishing theory in the classroom with reality in life, it enhances understanding and retention.

Materials Required:

A5 or A4 card paper for flashcards or posters

Printed or hand-drawn photos of everyday objects (e.g., fan, bicycle, mirror)

Sketch pens, pencils, crayons

Glue or tape

Optional: labels or icons representing scientific terms (e.g., motion, heat, force)

Mode of Activity:

Offline - Hands-on

Employees participate in a structured workshop (1-2 hours) where they create flashcards or mini-posters using real-world examples of science. The finished materials are compiled into sets and distributed to children through project partners or classroom kits. This can also be run as a team-building activity or CSR day engagement at the corporate office.

ACTIVITY 2: Story Cubes

Objective:

To boost creativity, storytelling skills, and language development by having children create and narrate stories using dice with different prompts. This activity makes storytelling spontaneous and fun while teaching the structure of a narrative—beginning, middle, and end. It encourages children to think on their feet and build confidence in expression.

Key Learning Outcomes for Children:

As kids make up tales using suggestions for characters, settings, and actions, they get better at speaking, putting things in order, and using new words. It helps kids use their imaginations, get better at talking to each other, and get better at making sentences. Group storytelling also helps kids learn how to listen, share, and work together.

Materials Required:

Cube templates (paper/cardboard)

Scissors, glue

Sketch pens or crayons

Optional: printed pictures or themed dice faces

Storage pouches or small boxes for completed sets

Mode of Activity:

Offline - Hands-on

Employees design dice with different story elements on each face (e.g., "a pirate," "in the forest," "finds treasure"). Children roll 2-3 cubes and use the combination to create a story. The kits are distributed to classrooms or used in storytelling corners for language sessions.

ACTIVITY 3: Math Dice Game

Objective:

The aim of this activity is to create opportunities for math practices such as addition, subtraction and counting to be participatory and fun through the use of exciting dice games. When kids roll number dice and have to make math problems, they engage in mental math, reasoning and pattern recognition. The element of randomness provided by the dice rolling generates interest and uncertainty, prompting kids to play enthusiastically. Staff assist by crafting colorful game boards, number cards, and challenge sheets using inexpensive or recycled materials. The activity turns math into an engaging, game-like experience that eliminates the fear of it and fosters enjoyment.

Key Learning Outcomes for Children:

Kids develop confidence in calculating simple arithmetic with the help of repetition and play. While rolling dice and calculating related problems, they enhance number identification, speed, and accuracy in calculations. Game-like structure encourages cooperation, taking turns, and friendly competition, promoting social learning along with scholarly development. It also accommodates differentiated learning – students can work at their own level, with complexity attuned through the variety of dice or challenge cards used. Physical and visual experience with numbers aids retention and accommodates struggling abstract learners.

Materials Required:

Paper or cardboard dice templates

Markers, crayons, scissors, glue

Game boards or A4 sheets with number puzzles

Number tiles (from paper or bottle caps)

Pouches or folders to store kits

Mode of Activity:

Offline - Hands-on

Employees participate in a math-themed workshop where they create dice labeled with numbers (1–6 or 1–12), simple game boards (e.g., roll and add, roll and subtract), and challenge cards. These materials are grouped into “Math Play Kits” for classrooms or learning centers. Teachers can use them in small groups or independent stations to reinforce core math skills in a fun and interactive way.

ACTIVITY 4: Rhyme Wheels

Objective:

This fast-paced, multi-level experience is proven to increase kids' phonemic awareness and emergent literacy skills with fun Rhyme Wheels that put a new spin on learning! By turning sections of this wheel to form different rhyming words, children discover word families in a fun and delightful way that absolutely resonates. paper staff to make these moveable spelling wheels with paper plates or cardstock, the outside wheel with familiar word endings (e.g., -at, -ig, -un) and the inner wheel rotating to introduce new beginning sounds (e.g., c, h, b). This tactile, visual experience breathes new life into phonics in a way that demystifies the complex and confusing world of reading's early beginnings, sharpening the focus on sound patterns and spelling rules to make phonics engaging and accessible for all early learners.

Key Learning Outcomes for Children:

Children will improve their phonological awareness by recognizing and generating rhyming words. They learn how words are constructed with sound segments, which is essential for spelling and decoding. This activity promotes early literacy as it focuses on repetition, recognition, and play. It develops fine motor skills as well because the children physically rotate the wheels and follow the changes in words. By rhyming in this manner, children also enhance pronunciation, vocabulary, and sentence-construction confidence – basic skills that serve reading fluency in the long run.

Materials Required:

Paper plates or card cut into circles

Split pins (paper fasteners)

Sketch pens or crayons

Glue, scissors

Optional: alphabet stickers or printed templates

Mode of Activity:

Offline - Hands-on

Employees design and assemble rhyme wheels during a volunteer session. Each set focuses on a specific vowel sound or rhyme group (e.g., "_at" = cat, bat, hat). The wheels are bundled into classroom sets and can be reused during phonics lessons or language labs. Teachers can use them for individual or group practice to reinforce word families in both reading and speaking sessions.

ACTIVITY 5: Puzzle Posters

Objective:

To help kids understand and recall school subjects better, they may put together educational posters that have been turned into puzzles. This not only helps you get better at solving problems, but it also helps you remember what you learned about a certain area.

Key Learning Outcomes for Children:

When kids put up posters on things like the food chain or the human body, they get better at remembering things, seeing things, and thinking logically. The exercise encourages concentration, awareness of space, and learning together by getting people to touch things.

Materials Required:

Printed or handmade posters (A3 size)

Chart paper or cardboard backing

Scissors, markers, glue

Pouches or ziplock bags to store puzzle sets

Mode of Activity:

Offline - Hands-on

Employees create subject posters, cut them into 4-10 puzzle pieces, and pack them into classroom kits. Teachers use them in class as reinforcement tools or group activities.

ACTIVITY 6: Child Rights Comic

Objective:

By using short comic strips that are drawn, you may teach kids about their basic rights. A few of the topics that can be simplified with the aid of this method that is both visual and approachable include education, safety, identity, and expression. These are just a few of the topics that can be simplified.

Key Learning Outcomes for Children:

Kids learn about their rights and how to deal with real-life problems, such as skipping school or being in a hazardous place. It helps people understand others, stand up for themselves, and think critically by sharing stories that others can relate to.

Materials Required:

A4 sheets or drawing paper

Pens, sketch pens, crayons

Comic strip templates (optional)

Printouts or story prompts on rights themes

Mode of Activity:

Offline - Hands-on

Employees write or illustrate short 4–6 panel comics around child rights themes. These are bundled into learning kits or displayed in classrooms for use in group reading or discussions.

ACTIVITY 7: Alphabet Animal Cards

Objective:

The goal is to help kids learn to recognize letters and learn new words when they are young. To do this, each letter of the alphabet is paired with an animal and a funny fact or statement about that species.

Key Learning Outcomes for Children:

The kids learn more about the world around them, as well as how to read and write by connecting letters and sounds. The animal theme not only catches the reader's attention, but it also makes learning to read more fun and memorable.

Materials Required:

A5 or index card paper

Animal images (printed or drawn)

Markers, glue, crayons

A-Z reference list for consistency

Mode of Activity:

Offline - Hands-on

Employees design one card per letter with an animal name, picture, and fact (e.g., "E is for Elephant - It has a trunk to drink water"). Cards are compiled into full A-Z decks for use in literacy corners.

ACTIVITY 8: Emotion Emoji Cards

Objective:

The goal of this game is to help kids learn to detect, name, and talk about their feelings by using simple flashcards that look like emojis. In the end, this will help people become more emotionally literate and conscious of themselves.

Key Learning Outcomes for Children:

Kids learn to identify fundamental feelings like happiness, sadness, anger, and fear, and they learn how these feelings relate to things that happen every day. This helps with empathy, controlling emotions, and talking to others, which are all important parts of social-emotional development.

Materials Required:

Flashcard paper or chart strips

Markers or crayons

Emoji drawings or printed faces

Short prompts or sentence starters (e.g., "I feel ____ when...")

Mode of Activity:

Offline - Hands-on

Employees create flashcards showing different emotions and example scenarios. Cards can be used in classrooms for daily check-ins, storytelling, or role-play exercises.

ACTIVITY 9: Problem-Solution Cards

Objective:

This practice is meant to help kids learn social thinking and decision-making skills that they can use in real life. The way this is done is by giving kids common problems and encouraging them to think about or pick good ways to solve them.

Key Learning Outcomes for Children:

Kids learn how to be empathetic, think critically, and be sure of themselves when they face real-life problems, such "You forgot your lunch" or "A friend is crying." It makes it easier to talk to others, be aware of yourself, and control your conduct.

Materials Required:

A5 cards or thick paper

Sketch pens, crayons

Scenario prompts and matching solutions (drawn or written)

Envelopes or pouches to store the card sets

Mode of Activity:

Offline - Hands-on

Employees write or illustrate problem cards and corresponding solution cards. Sets are bundled into classroom kits and used in group discussions or role-play sessions with children.

ACTIVITY 10: Safety Rule Mini-Zines

Objective:

Through the use of handcrafted mini-books that children are able to remember and go back to, the objective is to educate youngsters about vital safety standards in a manner that is not only enjoyable but also intuitively easy to understand.

Key Learning Outcomes for Children:

The goal of this project is to utilize handmade mini-books to teach kids about important safety rules in a way that is both fun and easy to grasp. The kids will be able to remember the rules and then go back to the books to learn more about them.

Materials Required:

A4 sheets folded into mini-zines (8-page booklets)

Pens, crayons, markers

Safety tip prompts (e.g., don't touch plugs, cross at the zebra crossing)

Optional: printed icons or symbols

Mode of Activity:

Offline - Hands-on

Employees create zines on different safety topics (road, fire, hygiene, etc.) with drawings and short messages. Booklets are distributed to children for reading and coloring in class or at home.

ACTIVITY 11: My First Dictionary

Objective:

To help kids learn the basics of language by letting them make their own graphical dictionaries. This exercise gives students control over their vocabulary acquisition and gives them a customized reference tool that they may keep adding to over time.

Key Learning Outcomes for Children:

Writing down words they hear, use, or find in class helps kids improve their spelling, word recognition, and comprehension of context. Making definitions in their own terms and incorporating pictures helps them remember. It also helps with organizing and learning the alphabet, which is the first step in understanding what you read and writing expressively.

Materials Required:

A4 sheets or folded paper booklets

Sketch pens, pencils, crayons

Sample word list or alphabet index template

Stickers or tabs for personalization (optional)

Mode of Activity:

Offline - Hands-on

Employees create starter kits with basic vocabulary templates (e.g., A-Z sections, spaces for words and pictures). Children fill in words from their environment, stories, or lessons. These dictionaries grow with them throughout the year and can be used by teachers for periodic review.

ACTIVITY 12: Career Flashcards

Objective:

The goal of this activity is to introduce children to a wide range of jobs on a large scale. This will help them picture their future options and understand how important different jobs are in society. To do this, they will use simple flashcards that combine pictures with short explanations.

Key Learning Outcomes for Children:

Children learn the names, equipment, and responsibilities of numerous professions, including farmers, teachers, engineers, and painters. This exercise teaches them new vocabulary, enhances their drive, and helps them know how things work. It also promotes gender equality by teaching children that anyone, regardless of their gender, can be employed in a wide variety of careers.

Materials Required:

A5 or index cards

Drawings or printed images of occupations

Markers, glue, crayons

Short job descriptions or tools-of-the-trade labels

Mode of Activity:

Offline - Hands-on

Employees design flashcards featuring different careers, writing 1–2 lines in child-friendly language (e.g., “A nurse helps people get better”). Cards are bundled into sets and used during classroom discussions, career days, or storytime activities.

ACTIVITY 13: Time-Telling Clocks

Objective:

To help kids learn how to read analog clocks and understand the concepts of hours, minutes, and daily routines, it is intended to use bright and moving teaching materials. This goal will be met through the use of teaching materials.

Key Learning Outcomes for Children:

Visual and hands-on learning helps kids learn how to recognize numbers, put things in order, and read the time. The exercise teaches fundamental words for telling time (such "o'clock" and "half past") and helps kids understand how things are structured and how to follow a schedule in their everyday lives. This helps them with both arithmetic and life skills.

Materials Required:

Paper plates or thick card circles

Split pins (paper fasteners)

Sketch pens, crayons

Cut-out clock hands (hour and minute)

Mode of Activity:

Offline - Hands-on

Employees create functional clock models with rotating hands. Each set can include a clock face, sample time task cards (e.g., "What time do you eat lunch?"), and routine-matching activities. Kits are distributed to classrooms for math or daily life skill practice.

ACTIVITY 14: Bilingual Word Cards

Objective:

The goal of this project is to help kids improve their language skills by teaching them vocabulary in both English and their native language (like Hindi) using visual flashcards that help them understand both home and school.

Key Learning Outcomes for Children:

Kids learn to read and write better in both languages, which helps their memory, literacy, and communication abilities. It also helps with cognitive flexibility and makes you feel more at ease while switching between home and school language usage.

Materials Required:

Flashcards or small chart paper pieces

Printed or drawn images

Pens, crayons, glue

Word lists in English and local language (e.g., "Tree - पेड़")

Mode of Activity:

Offline - Hands-on

Employees create bilingual flashcards that pair common words (fruits, animals, objects, verbs) with simple visuals. These cards are grouped into themed decks for language learning sessions and storytelling support.

ACTIVITY 15: Nutrition Snap Cards

Objective:

To help kids learn about healthy foods and their advantages through interactive flashcard games that encourage healthy eating habits. This game connects common foods to the nutrients they give you, which helps kids make smart decisions from an early age.

Key Learning Outcomes for Children:

Kids learn to tell the difference between nutritious and bad foods, what nutrients like vitamins, protein, and fiber do, and how to tell the difference between different food categories. The practice also helps with memory, visual learning, and getting people to talk about their food habits and health.

Materials Required:

Flashcard paper or index cards

Printed or hand-drawn images of foods

Markers, glue, optional stickers

Short nutrition facts (e.g., "Carrots = Good for Eyes")

Mode of Activity:

Offline - Hands-on

Employees create snap card sets that pair food images with their health benefits. These are packaged into kits and used as classroom games or group quizzes to reinforce healthy eating messages in a playful, child-friendly way.

ACTIVITY 16: Recycled Art Cards

Objective:

To get kids to be more creative and concerned of the environment by showing them how to use daily trash in art projects. This practice helps people appreciate sustainability while also letting them express themselves artistically.

Key Learning Outcomes for Children:

By making crafts out of things that would otherwise be thrown away, kids learn how to recycle and think beyond the box. It improves fine motor skills, creative thinking, and the habit of being attentive about what you buy and use.

Materials Required:

Scrap paper, cardboard, plastic caps, buttons, fabric scraps

Sketch pens, glue, scissors

Instruction cards or photo guides for sample crafts

Mode of Activity:

Offline - Hands-on

Employees design visual instruction cards showing how to make simple crafts (like pen holders, toys, or wall art) from waste materials. Kits are bundled with raw materials where possible and used in classrooms or activity centers.

ACTIVITY 17: Friendship Bracelet Kits

Objective:

Making and trading friendship bracelets is a way to teach kids to be nice, empathize with others, and make friends. The exercise utilizes an innovative way to help kids interact with one other and make friends.

Key Learning Outcomes for Children:

Making simple projects helps kids learn how to use their hands, be patient, and stay focused. They also learn the importance of sharing, working together, and being grateful by giving and receiving a handmade present, which helps them build social-emotional skills.

Materials Required:

Colored threads or yarn

Beads (optional)

Instruction cards with step-by-step visuals

Ziplock bags or envelopes to pack individual kits

Mode of Activity:

Offline - Hands-on

Employees create and assemble bracelet-making kits with clear instructions and pre-cut thread sets. The kits are distributed to classrooms where children create bracelets to gift to classmates, reinforcing the message of friendship and inclusion.

ACTIVITY 18: Story Sequencing Cards

Objective:

The goal of this is to assist kids learn the structure of a tale by putting the events that are seen or written in the appropriate order. By taking part in this exercise, one may increase their abilities in the areas of comprehending, thinking, and narrative.

Key Learning Outcomes for Children:

Kids get better at figuring out cause and effect, making logical connections between events, and understanding how stories start, change, and conclude. It helps in getting ready to read, telling stories out loud, and thinking for oneself.

Materials Required:

Sets of 3-6 story cards per sequence

Drawings or printed images for each scene

Markers, glue, scissors

Envelopes or folders to pack story sets

Mode of Activity:

Offline - Hands-on

Employees create simple stories broken into visual steps (e.g., "Planting a Seed," "Going to School") and design them as separate cards. Children arrange them in the correct sequence and retell the story in their own words, individually or in groups.

ACTIVITY 19: Shape Sorting Mats

Objective:

The goal of this project is to help kids learn the basics of geometry and categorization by teaching them how to recognize, name, and organize shapes. This goal will be reached by using interactive mats and cut-out pieces.

Key Learning Outcomes for Children:

The first steps in learning geometry include being able to see forms, being aware of space and how things go together, and sorting things into groups. The practice helps people improve their fine motor skills, attention to detail, and logical reasoning by having them arrange things by hand.

Materials Required:

A4 mats with printed or drawn shapes

Shape cutouts (circles, squares, triangles, etc.)

Velcro dots, glue, or flaps for matching

Crayons or markers for coloring tasks

Mode of Activity:

Offline - Hands-on

Employees prepare mats and matching cutouts, grouping them by theme (e.g., "Find all the circles in the kitchen"). The kits are used by children in learning centers as independent or guided practice.

ACTIVITY 20: Budgeting Worksheets

Objective:

We will help kids learn the basics of financial literacy by having them make choices that need careful thought while utilizing a limited fake budget. This game helps children learn how to make choices, what money is worth, and the difference between necessities and wants.

Key Learning Outcomes for Children:

Kids start to learn how to budget, set priorities, and make plans. They learn how to tell the difference between necessary and unnecessary costs and how money is used in everyday life. It also helps people learn how to do math and think critically.

Materials Required:

Printed worksheet templates (₹100 budget format)

Cutouts or icons of common items (e.g., food, toys, books)

Crayons, pencils, glue

Price labels or sample cost list

Mode of Activity:

Offline - Hands-on

Employees design engaging worksheets where children select and “buy” items totaling ₹100. They write or draw what they would choose and explain why. Worksheets are used in class or at home as part of life skills or math sessions.

Thank you
