

CHILD EDUCATION AND PROTECTION REPORT (DEC 2024- MAY 2025)

Prepared by - Ritam Misra

Date: 18th June 2025

1. Introduction

India, home to more than 40% of the children of the world, is at a critical juncture in enacting the rights and welfare of its youngest citizens. Significant advances have been made on legislative codes and education policy, but the persistent issues of implementation, perception, shortage of infrastructure, and social inequality persist and determine the degree of accessibility of quality education and protection systems for children.

This article tries to uncover the latest trends in children's education and protection with a critical analysis of ten recent Hindustan Times and Dainik Bhaskar news stories. The articles convey the latest government policies, grass-root initiatives, experts' opinions, and local case studies collectively offering an informed view of how India is handling children's care in 2025.

2. National Plans for Child Protection and School Safety

2.1. Legal Awareness and Enforcement Strengthening

The article in the Hindustan Times entitled "Child protection laws need awareness, proactive administration..." draws attention to the imperative of raising public and institutional consciousness regarding child protection legislation. Experts spoke at a national conference organized by the National

Commission for Protection of Child Rights (NCPCR) that such laws as the POCSO Act and the Child Labour (Prohibition and Regulation) Act are largely ineffectual due to the absence of awareness at the grassroots level, absence of gender-sensitive education, and judicial inaction.

Suggestions such as mobile courts, gender-neutral campaigns, and outreach programs were suggested as the means to bridge the gap between practice and policy.

2.2. School Safety Norms Implementation

In one of its other key policy initiatives, the Education Ministry has asked all union territories and states to enforce the School Safety and Security Guidelines – 2021 rigorously, keeping in mind the POCSO Act provisions. Based on the Hindustan Times report, schools must install CCTVs, establish internal complaint committees, conduct routine safety drills, and train staff members in child protection mechanisms.

This is just one component of a larger initiative to shift school environments from being pure learning centers to learning institutions that are safe for the all-round development of children.

3. Reforms in Early Childhood Education

A news item "State sets uniform course for early education" in Maharashtra documents the rollout of a common curriculum for early childhood education in over 110,000 anganwadis. The program, titled "Aadharshila," is grounded in the National Education Policy (NEP) 2020 emphasizing foundational learning, play-based education, and experiential learning for children aged 3-6 years.

This curriculum reform aims to bridge the learning gap between pre-primary institutions and mainstream schooling so that children enter Class 1 equipped with the thinking and social abilities of their age group. With more than 3 million children set to gain from this scheme, Maharashtra's model can be a template for other states.

4. Holistic and Values-Based Learning Approaches

4.1. Global Reflections: The Tennessee Family Education Bill

From a comparative global vision, Hindustan Times featured a report on a bill introduced in the US state of Tennessee under which students in schools would study marriage and family obligations as a module for life preparation. Different as the cultural contexts are, the idea behind it—to equip children with emotional intelligence, relationship skills, and values—resonates with the ongoing attempts at incorporating life-skills education into Indian curricula.

This is a reminder that education in itself cannot provide children with what they will require in adult life.

4.2. Integrating Sports into Education

In an article titled "Make sports integral to school education", the author makes a compelling argument in favor of incorporating sports and physical education within school curriculum. Quoting the benefits of sport as a means to encourage discipline, teamwork, mental strength, and physical fitness, the article is adamant about change within schools in the form of mandatory period of sports, upgraded facilities, specialized trainers, and inter-school competitions.

These are amenable to the NEP 2020's emphasis on holistic education that considers academics, physical education, and emotional development.

5. Computer Literacy and Safety in the Age of Social Media

A report by Dainik Bhaskar titled "Parental consent for children's social media accounts under new Data Protection Rules" explains the Ministry of Electronics and IT's proposed legislation for ensuring parental consent to make children

below 18 years of age use social media accounts. The policy recognizes the increasing vulnerability of children online and aims to include a safer online environment through suitable filters, consent, and parental involvement on the basis of age.

In consideration of rising screen time for children post-COVID, this regulatory step is a timely and much-needed move towards digital safety as child protection.

6. Grassroots Initiatives and Regional Case Studies

Beyond policies and specialist arguments, grassroots movements are the most significant link to child protection and empowerment. Five regional stories covered in Dainik Bhaskar tell us a lot about the variety and value of community-level action:

6.1. Promoting Digital Literacy Among Orphans

A rally was organized in Rajasthan's Jaisalmer to promote computer education among orphans. School officials, local leaders, and volunteers collaborated to provide computer labs and digital modules for learning—showcasing the role of public-private partnerships in helping marginalized children overcome the digital divide.

6.2. Protection Workshops and Human Trafficking

A special workshop in Hathras, Uttar Pradesh, was conducted to sensitize children in school about human trafficking, exploitation, and legal proceedings. The workshop had police officials, social workers, and legal instructors and set an example of an inter-disciplinary collaboration for legal literacy.

6.3. Awareness under POCSO in Panchkula

A POCSO campaign was conducted by the Panchkula police at Haryana's Chitkara International School. Interactive methods of learning were employed in

this program to educate children about body autonomy, safe/unsafe touch, and reporting mechanisms—highlighting the role of the police in making schools safe.

6.4. Jalalabad School Safety Training

In Jalalabad, UP, schools were tackled in a safety campaign with a focus on first aid, emergency response, and anti-bullying. The involvement of local NGOs gave the initiative fortitude so that it would be community-suited.

7. Key Challenges and Emerging Trends

The reports reveal recurring system and operation challenges to implementing policies of child protection and education:

Challenge- Implication

- Low public awareness- Diluted legal protection mechanisms despite strong laws
- Digital vulnerability- Children exposed to dangers on the internet in the absence of proper regulation
- Curriculum deficiencies- Lack of life-skills and physical education restricts holistic growth
- Rural–urban differentials- Facilities, teacher training, and safety features are lagging

Implementation is patchy. Policies not implemented with equal vigor in all states and districts.

Yet, some positive trends can be seen:

- Increased media attention to children's rights.
- Police and civil society increasingly filling their roles in creating awareness.
- Policy changes towards curriculum restructuring and protection of the internet.

- Introduction of global pedagogic perspectives.

8. Conclusion

Child protection and education in India is a dynamic area in which law, educational policy, technology, and grass-roots action must meet. The articles considered collectively present a portrait of a society aware of the stakes but still wrestling with uneven implementation.

To the forefront is an unambiguous call to action—legislation and money, yes, but education, involvement, and empowerment of all who are stake-holders in the child's life. From policy at the national level to grassroots action, from e-protection to emotional well-being, India's future is at stake with how deeply we commit ourselves to the rights, protection, and education of every single child—not merely on paper, but in practice.
